

Cordata Haven: Coordinated Pathways for Addiction and Mental Health

Helping communities work as one to connect people with complex needs to timely, coordinated care.

Cordata equips first responders, healthcare providers, behavioral health teams, public safety agencies, and community organizations with the tools and shared workflows they need to coordinate care for people facing addiction, mental health challenges, and related social needs. The challenge is rarely a lack of services; it is a lack of coordination. Haven, Cordata's solution for addiction and mental health, helps communities move from fragmented referrals and episodic crisis response to coordinated, person-to-person follow-through across agencies.

What Haven Does

Haven creates coordinated community care pathways for individuals who need support after an overdose, behavioral health crisis, public safety encounter, outreach contact, or referral from a community partner. It gives teams shared visibility into client needs, outreach activity, referrals, assessments, services, and follow-up so each organization can act with the full context of what is happening around the person.

- **Coordinate cross-agency response:** Connect healthcare, behavioral health, public safety, peer support, social service, and community partners around a shared plan.
- **Support early intervention:** Turn crisis touchpoints into opportunities for outreach, engagement, treatment connection, recovery support, and prevention.
- **Guide frontline work:** Provide mobile access for outreach teams so information can be captured and used in the field, not only after the fact.
- **Make needs visible:** Use client overviews, service histories, referral tracking, and geographic views to help teams prioritize action and understand community patterns.
- **Measure performance and impact:** Generate on-demand reports on demographics, activity, interventions, assessments, referrals, and outcomes to support program improvement, grant reporting, and accountability.

Powered by Pelorus

Haven runs on Cordata's Pelorus technology, the underlying platform that connects people, data, workflows, and organizations into a coordinated operating model. Pelorus supports configurable workflows, role-based collaboration, secure information sharing, actionable dashboards, mobile use, and reporting that helps teams see what is happening across the community and act with confidence.

Why It Matters

Individuals navigating addiction, mental health challenges, housing instability, trauma, and other barriers often touch multiple systems without receiving sustained, coordinated support. Haven helps communities close that gap by making follow-through visible, aligning partner action, and helping teams stay connected to the individual beyond the initial referral or crisis event.

- **For individuals:** Faster connection to treatment, recovery supports, prevention resources, and social services.
- **For teams:** Better coordination, clearer priorities, and reduced duplication of effort.
- **For communities:** Stronger partnerships, better use of resources, and improved insight into what is working across the ecosystem.
- **For funders and leaders:** Real-time reporting that supports transparency, continuous improvement, and measurable outcomes.

The Cordata Difference

Cordata is more than software. We partner with communities to align people, practice, and technology so organizations can intervene earlier, collaborate more effectively, and follow through with confidence. With Haven on Pelorus, communities gain a practical, field-tested way to coordinate addiction and mental health response, helping more people receive the right support at the right time.

Every Community. Every Stage. Real Impact.

Cordata meets you where you are in your maturity journey.

Whether you're building the foundation or ready to scale, we help you strengthen systems and drive results.

No matter where you are on your journey, Cordata meets you there—and helps you go further.
